¹⁾ Physical and chemical properties comply with DIN grade ASTM nearest equivalent stated for guidance only.

Float Trap UNA 27 h PN 63, DN 25, 40, 50 mm (1", 1½", 2")

Description

Ball float trap with rolling ball valve and Duplex control (thermostatic bellows for automatic air venting) for draining large condensate flowrates from steam systems. With non-return valve and drain plug.

With Simplex control (without bellows) and hand vent valve for the discharge of cold condensates or distillates and for draining superheated steam, gas or compressed-air lines.

Body with bolted cover. Control unit easily replaced without removing trap from the line.

On request:

- with float-lifting lever
- Hand vent valve (for Duplex design)

Pressure / Temperature Rating

PMA (Maximum allowable pressure)	[bar g] [psi g]	63 915	56 810	47 680	45 650
TMA (Maximum allowable temperature)	[°C] [°F]	250 482	300 572	400 752	450 842
ΔPMX (Maximum differential pressure (inlet pressure minus outlet pressure))		45 bar (650 psi) (28 or 16 bar)			

Connections

- Flanges: DIN 2546 (form E) PN 63
- Flanges ASME B 16.5 Cl. 300, 400/600
- Socket-weld ends DIN 3239 Class 3000
- Butt-weld ends DIN 3239

Butt-weld ends according to DIN 3239-2-R3, edge form 22 according to DIN 2559

DN				
mm	in	Ø d ₂	Ø d ₁	for pipe
25	1	34	28.5	33.7 x 2.6
40	1½	49	43	48.3 x 2.6
50	2	61	54	60.3 x 3.2

Socket-weld ends acc. to DIN 3239-R5 / ASME B 16.11, Class 3000

DN				
mm	in	Ø D ₂	Ø D ₁	b
25	1	46	34.1	13
40	1½	65	48.7	13
50	2	76	61.5	13

Float Trap

UNA 27 h

(1", 1½", 2")

Capacity Chart

The chart shows the maximum capacities of hot condensate for the range of orifices (O) and sizes available. The cold water capacities are: Capacity of hot condensate multiplied by factor F.

The capacities are dependent on the differential pressure (working pressure). The differential pressure is the difference between inlet and outlet pressures and depends among other things on the run of the line. If the condensate downstream of the trap is lifted, the differential pressure (working pressure) is reduced by approximately 1 bar for 7 m (or 2 psi for 3 feet) in lift.

The maximum admissible differential pressure is dependent on the cross-sectional area of the orifice.

The standard design of the trap is available for a maximum differential pressure of 45 bar (650 psi), see thick lines in the chart.

If, however, larger capacities are required, special orifices are available for differential pressures of: 28 bar (405 psi) or 16 bar (230 psi) (dashed lines in the chart).

Orifice (O)	DN 25	
	k_{vs} values [m³/h]	Ø of hole [mm]
O 45	0.31	3
O 28	0.38	3.5
O 16	0.44	4.1
DN 40 + 50		
O 45	1.1	6.5
O 28	1.5	7
O 16	2.1	8.5

When ordering please state:

Inlet pressure, outlet pressure, quantity of condensate to be discharged, design, size and desired orifice, position of the trap and details of application.

The following test certificates can be issued on request, at extra cost:

In accordance with EN 10204-2.1, -2.2, -3.1A, -3.1B and -3.1C.

All inspection requirements have to be stated with the order. After supply of the equipment certification cannot be established. For tests and inspection charges please consult us.

Supply in accordance with our general terms of business.
