Float Trap

UNA · PN 25

DN 80 and 100 mm (3 and 4")

Description

Float trap with slide valve closing mechanism for draining condensate from steam systems and for the discharge of other cold condensates or distillates.

The slide valve is operated by the ball float as a function of the condensate level in the trap, i.e. the cross-sectional area depends on the amount of condensate formed.

Body with flanged cover. The control unit is connected to the cover. After removal of the cover the control unit is easily accessible without removing the trap from the line.

Standard design with vent valve and lifting lever permitting purging of the trap during operation.

Pressure / Temperature Rating					
Max. service pressure	[barg]	25	22	17	13
	[psig]	360	320	245	185
Related temperature	[°C]	120	200	300	400
	[°F]	248	392	572	752
Max. differential pressure (inlet pressure minus outlet pressure)		22 bar (320 psi) (16; 12; 8; 5; 3.5; 2)			

Connections

Flanges: DIN (BS 4504) PN 25.

Flanges to ASME 150 on request at extra cost.

Float Trap UNA · PN 25

Capacity Chart

The chart shows the maximum capacities of boiling hot condensate for the range of orifices (O) and sizes available. The cold water capacities are: Capacity of boiling hot condensate multiplied by factor F.

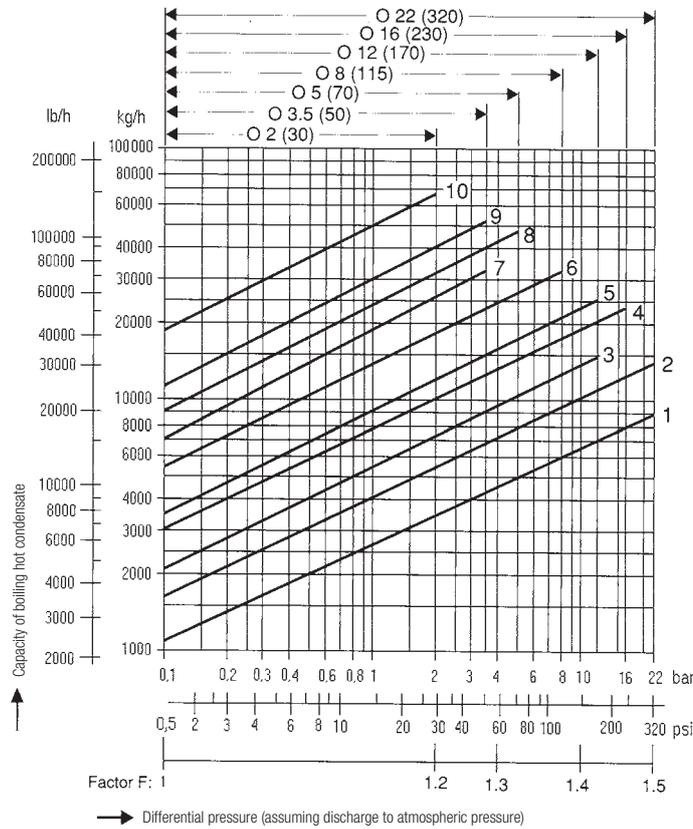

The capacities are dependent on the differential pressure (working pressure). The differential pressure is the difference between inlet and outlet pressures and depends among other things on the run of the pipeline. If the condensate downstream of the trap is lifted, the differential pressure (working pressure) is reduced by approximately 1 bar for 7 m (or 2 psi for 3 feet) in lift.

The maximum admissible differential pressure is dependent on the cross-sectional area of the orifice.

The standard design of the trap is available for a maximum differential pressure of 22 bar (320 psi).

If, however, larger capacities are required, special orifices are available at extra cost for differential pressures of:

- 16 bar (320 psi)
- 12 bar (170 psi)
- 8 bar (115 psi)
- 5 bar (70 psi)
- 3.5 bar (50 psi) or
- 2 bar (30 psi)

Available orifices	
1	DN 80 (3") O 22 (320)
2	DN 80 (3") O 16 (230) DN 100 (4") O 22 (320)
3	DN 80 (3") O 12 (170)
4	DN 100 (4") O 16 (230)
5	DN 80 (3") O 8 (115) DN 100 (4") O 12 (170)
6	DN 80 (3") O 5 (70) DN 100 (4") O 8 (115)
7	DN 80 (3") O 3.5 (50)
8	DN 100 (4") O 5 (70)
9	DN 80 (3") O 2 (30) DN 100 (4") O 3.5 (50)
10	DN 100 (4") O 2 (30)

(Cold-water capacity ≈ capacity of boiling hot condensate x factor F)

When ordering please state:

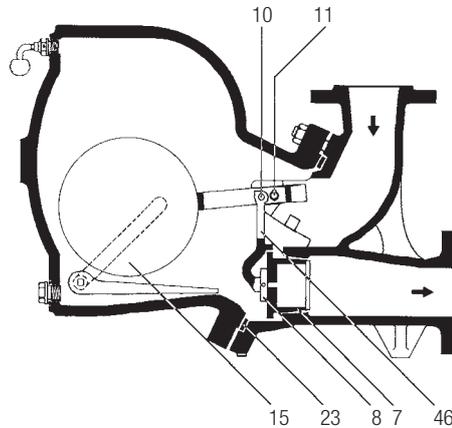

Inlet pressure, outlet pressure, quantity of condensate to be discharged, design, size and desired orifice, position of the trap and details of application.

The following test certificates can be issued on request, at extra cost:

In accordance with EN 10204-2.2 and -3.1 B.

All inspection requirements have to be stated with the order. After supply of the equipment certificates can no longer be established. Charges and extent of the above mentioned certificates as well as the different tests confirmed therein are listed in our leaflet "Test and Inspection Charges for Standard Equipment". For other tests and inspections than those listed above, please consult us.

Supply in accordance with our general terms of business.
